

R

Series
Heavy Duty Forklift Truck

5.0-10ton

Comfort & Ergonomics

- The Right Truck For The Job
- Simple to Drive and Operate
- Easy Entry & Exit
- Large Operating Space
- Suspension Seat(option)
- Excellent Visibility
- Tiltable Steering Column
- Multifunctional LCD Display
- Smoke Purification Device (Option)
- Wide View Cabin (Option)

Safety Operation

- Integral Heavy Duty Chassis
- Active stability system
- Mast Intelligent Buffering System
- Park Brake Warning Buzzer (Optional)
- Operator Presence Security System (Optional)

Optional Attachments

- Integrative Side Shifter
- Fork Positioner
- Fork Clamp
- Rotating Fork
- Bale Clamp

High Efficiency & Productivity

- Precision Steering
- Powerful Engine
- Higher Acceleration Ability
- Powerful Hydraulic Transmission
- Faster Lifting & Lowering Speed
- Easy Operation Shift Lever
- Snorkel Air Intake

Superior & Economic Serviceability

- Easy Service and Maintenance Design
- Central Integrated Electric System
- Robust Engine Hood
- Easy to open Radiator Cover

Reliable Forklift

- Reliable Quality
- Perfect After Sales Service System
- Comprehensive Parts Supply System
- Experienced Technical Support Team

Invisible Value

- LED Combination Lamp & Reverse Warning Light
- Excellent Heat-releasing Performance
- Integral Overhead Guard
- Stronger Wide View Mast

COMFORT & ERGONOMICS

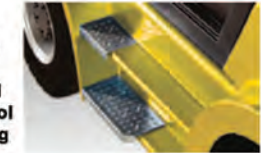

The Right Truck For The Job

DLift 5-10Ton forklift trucks offer load capacities ranging from 5 to 10 tonnes, delivering the right model for each specific customer requirement. A wide range of features and options allows you to choose the truck that meets your specific needs and keeps your business performing at the highest possible level."

Simple to Drive & Operate

Driver productivity has been increased by studying operational needs. Even occasional drivers will find the heavy duty trucks simple to drive. An inching pedal allows even more driving control when approaching racks or picking up pallets.

Easy Entry & Exit

To produce heavy duty forklifts, DLift looked at the whole driver-forklift relationship and then designed a heavy-duty truck that provides excellent driver ergonomics. You'll notice the difference before you even start the smooth DLift engine. First, a wide step provides easy entry and exit.

Excellent Visibility

- * Newly designed backrest and fork carriage with excelled fork tip visibility
- * Super Wide view mast with hidden hose design dramatically improves the front and lifting visibility, ensuring the safety of operation.

Large Operation Space

Once you are on board, ample floor space and a thick moulded rubber floor mat provide a soft, comfortable place for your feet. With the spacious driving space and relaxing position you will enjoy operating the forklift.

Suspension Seat (option)

With optional suspension seat, the operator can experience great driving comfort by adjusting the seat backrest, the seat position, and the suspension grade according to different driver's height and weight. It dramatically reduces the operator's fatigue.

COMFORT & ERGONOMICS

Multifunctional LCD Display Meter

All controls and pedals are laid out for optimized ease of use. The layout of meters and gauges in an integrated combination panel makes it simple to monitor functioning at a glance, and the greater variety of meters used assures a better awareness of vehicle status at all times.

Tilttable Steering Column

When operating the truck, full hydraulic power steering provides effortless manoeuvring, even with heavy loads. The tilttable steering column features a steering knob for a comfortable, relaxed grip on the wheel.

Wide View Cabin (Option)

With full glass cabin and less plastic design, the operator can view all surroundings easily. This can help to reduce the operator's eye fatigue and also provide a pleasant working environment.

Smoke Purification Device (Option)

With optional smoke purification device, it can dramatically purify the harmful gas into harmless carbon dioxide and water vapor.

Powerful Hydraulic Transmission

The Powerful Hydraulic Transmission converts powerful acceleration response.

Easy Operation

The direction lever can be operated with just the finger tips, boosting handling efficiency while reducing operator fatigue.

Snorkel Air Intake

To ensure a supply of clean air for the engine, a snorkel air intake is located on the counter weight.

SAFETY OPERATION

Most Intelligent Buffering System

With intelligently declining buffer sensors on the two ends of the cylinder, the speed of the forks slow down automatically before it is 10cm from ground, and the lifting speed to the top also slows down increasing the safety of the goods and forklift.

Integral Heavy Duty Chassis

An integral heavy duty chassis provides the driver with 20% more protection from falling loads.

HIGH EFFICIENCY & PRODUCTIVITY

Faster Lifting & Lowering Speed

Considering safety and energy-saving, DLift Forklifts pays close attention to the development of the hydraulic system, and increases lifting and lowering speed to ensure productivity.

Precise Steering

The new axle provides wider steering angles to 85 degree to present a superior smart turning radius of the Forklift, and with the compact design, the forklift can easily be operated and congested space.

Higher Acceleration Ability

20% higher acceleration ability, surprisingly shortens the working time at the same working distance, and improves the working efficiency.

Powerful Engine

"The powerful 6-cylinder diesel engine is designed to comply with the emission regulation EN 97/68 stage IIIa.

Operator Presense Security System (Option)

With operator presense security system, the fork cannot be operated when the operator leaves the seat ensuring the safety of goods and people at emergency situations.

Parking Brake Warning Buzzer (Option)

An automatic-style parking brake ensures convenience and safety. The warning buzzer will sound when the operator leaves the seat without parking the forklift.

System of Active Stability

With the SAS, the wheels can swivel up and down according to the working conditions to stay stable. This provides the driver with a safer and more comfortable heavy duty forklift truck.

SUPERIOR & ECONOMIC SERVICEABILITY

Easy Service & Maintenance Design

The bolt mounted foot step cover can be easily taken off to do inspection.

Reliable Hydraulic System

With reliable hydraulic design and components, the hydraulic components are highly durable which can lower the cost in maintenance.

Robust Engine Hood

"The engine hood is completely sealed for maximum comfort, and opens fully to a wide 85°. A hood damper reduces the effort needed to open the hood."

Central Integrated Electric System

The central integrated design of the electric system enables the service to be easier and faster.

Easy-open Radiator Cover

A sealed design is used for the radiator cover as well, and easy access is assured by the handy damper.

OPTIONAL ATTACHMENTS

Integrative Side Shifter

The integrative side shifter is integrated in the fork carriage. With this attachment, the fork carriage can move from left to right to precise the lifting position.

Fork Clamp

This attachment is effective for handling packed cotton or rough textile loads by grabbing them firmly from both sides.

Block Clamp

This attachment can pick up concrete blocks without using pallets.

Rotating Fork

Used together with the fork inserted container, this attachment is used for transporting items such as powder, fluids, etc. The fork is rotated in order to discharge the load.

Fork Positioner

With optional fork positioner in 5.0-7.0ton and standard in 9.0-10ton, the fork will be adjusted automatically by operating the third and fourth operation lever. It dramatically improves the working efficiency.

Roll Clamp

Rolls of paper or cylindrical objects are safely and securely handled by this attachment. It is possible to rotate the clamped load through 360 degrees.

Bale Clamp

This attachment is recommended for handling packed pulp or raw cotton. The bale is efficiently held from both sides by the bale clamps.

INVISIBLE VALUE

Excellent Heat-releasing Performance

Considering to improve the heat-releasing performance, DLift forklift engineers design the best location of the engine fan, radiator and muffler. Together with the increased heat-release space in the counter weight, DLift forklift performs at an excellent heat-releasing percentage.

Stronger Wide View Mast

DLift engineers designed a stronger wide view mast by re-placing the position of the mast cover and tilt cylinder. By using a stronger mast cross, offers great durability.

Integral Overhead Guard

The front pillar, the rear pillar and the top pillar all welded and integrated in the same structure, this increases the strength of the whole forklift.

LED Combination Lamp & Reverse Warning Light

LED combination lights are equipped on top of the overhead guard and are standard on DLift forklifts. LED lamps is lighter and more durable. The reverse warning light will flash when you switch on the forklift and also flash when you reverse the forklift. This can warn people around and makes it safer in the working place.

RELIABLE BY FORKLIFT

Reliable Forklift Quality

With the international testing standard, more reliable supply chain, high quality control DLift ensure the quality of its forklifts.

Comprehensive Parts Supply System

DLift provides an efficient after sales parts system.

Experienced Technical Support Team

There are very experienced technical support teams at DLift to provide professional training to clients from different countries.

Perfect After Sales Service System

With perfect after sales service and I-NET systems, DLift can analyze each forklift issue easier, faster and more accurate.
